# Pexco's Roadside Delineator Posts Increase Visibility and Improve Safety

## Flexi-Guide roadside delineator posts save lives by deterring dangerous Run-off the Road auto accidents

Studies have shown that 24% of all the fatal crashes that occur on 2-lane roads are the result of single vehicle run-off-the-road crashes. Flexi-Guide posts can be placed at critical points along roadways at winding curves, near intersections and on and off ramps to identify safety hazard areas.

In all kinds of weather, Flexi-Guide posts are highly visible, day and night. Flexi-Guide posts clearly delineate the edge of the roadway with bright reflective sheeting mounted on the posts at eye level.

*FG 500 posts are field and NTPEP tested for durability and flexibility.*

The Flexi-Guide is the first post to not only meet, but exceed field performance standards using recycled polymers! The specially engineered polymer formula provides extended outdoor weatherability, superior strength and high flexibility. The posts have been field tested consistently demonstrate a high resistance to UV deterioration while proving continued strength and longevity in severe weather.

Both the patented FG 400 Series, double curve post and the standard single curve design of the FG 500 & Fantasma Series post, can withstand high speed punishment. They offer better protection of the

reflective sheeting and better visual guidance for the motorist from various angles of approach.

The posts offer sheeting versatility to meet nation wide specifications. Select from Engineering Grade, High Intensity or Super High Intensity sheeting for superb night time visibility and to meet your state's specifications. Posts can be ordered in various colors and lengths, with and without soil anchor systems.

Custom orders can include custom colors, message decals for utility markers and steel U-Channel anchors.

*Both post styles are easily installed using an FG 103 Post Driver.*
